Project description: Akade is the Centre for Teaching and Learning. We are contributing to the education ecosystem through the R&D activity, creating open education programs, collaborating and promoting collaboration with advanced scientific organizations and organising educational events. Currently, we are developing a real-world problem-based learning program. The main subjects in the program are adapted to foster general competencies like critical thinking, ethics, creativity, team-working, social and problem-solving skills. We believe that real-world problem-based learning and innovative teaching methods inspire curiosity and improve learning ability, especially for disengaged and disconnected students. Our goal is to make this program specifically tailored for secondary school students in the fast-changing world and scalable through open schooling initiative across Europe and beyond. We are open for strategic partnerships working within Horizon 2020 framework. We are looking forward to interested parties who want to bring cutting-edge educational projects to fruition.
